Patrick Artus is the chief economist of Natixis.

Asia is still kicking the can without fundamental problems. Economists have trouble predicting the future, and the current situation is no exception. Economists are divided on the outlook for the global economy, which is expected to grow at a slower pace in 2012. Some predict a rebound, while others forecast a slowdown. The global economy is facing several challenges, including the debt crisis in Europe, the U.S. fiscal cliff, and the slowing economy in China. These factors could have a significant impact on the world economy in the coming years.

According to a report by the International Monetary Fund (IMF), the global economy is expected to grow by 3.6 percent in 2012, down from 4.4 percent in 2011. The report notes that the slower growth is primarily due to the debt crisis in Europe and the U.S. fiscal cliff. The IMF also highlights the need for continued monetary and fiscal stimulus to support the global economy.

The report notes that while the global economy is slowing, there are signs of improvement in some countries. China, for example, is expected to grow by 7.5 percent in 2012, up from 7.3 percent in 2011. The Indian economy is also expected to grow by 5.9 percent in 2012, up from 5.7 percent in 2011. The report notes that these countries are more resilient to shocks than the developed economies, which are struggling with high debt levels and low growth.

The IMF report also notes that the global economy is facing several risks, including the potential for a deeper recession in Europe and the U.S. fiscal cliff. The report recommends that policymakers continue to support the global economy through monetary and fiscal stimulus.

In the short term, the global economy is expected to grow at a slower pace than in recent years. The report notes that the global economy is facing several challenges, including the debt crisis in Europe and the U.S. fiscal cliff. The IMF recommends that policymakers continue to support the global economy through monetary and fiscal stimulus.

In the long term, the global economy is expected to grow at a slower pace than in recent years. The report notes that the global economy is facing several challenges, including the debt crisis in Europe and the U.S. fiscal cliff. The IMF recommends that policymakers continue to support the global economy through monetary and fiscal stimulus.

The global economy is facing several challenges, including the debt crisis in Europe and the U.S. fiscal cliff. The IMF recommends that policymakers continue to support the global economy through monetary and fiscal stimulus.

In the short term, the global economy is expected to grow at a slower pace than in recent years. The report notes that the global economy is facing several challenges, including the debt crisis in Europe and the U.S. fiscal cliff. The IMF recommends that policymakers continue to support the global economy through monetary and fiscal stimulus.

In the long term, the global economy is expected to grow at a slower pace than in recent years. The report notes that the global economy is facing several challenges, including the debt crisis in Europe and the U.S. fiscal cliff. The IMF recommends that policymakers continue to support the global economy through monetary and fiscal stimulus.

The global economy is facing several challenges, including the debt crisis in Europe and the U.S. fiscal cliff. The IMF recommends that policymakers continue to support the global economy through monetary and fiscal stimulus.
